RE: China Project

Further to our brief discussion in New York, i ...ground information on the China project that has bee ...e. Included are: -- a study on ETS and lung cancer among fema ...n Guangzhou published in the proceedings of Indoor Air '93, a conference held in Helsinki, Finland in April; -- English language abstracts of some of the additional studies that have been conducted in China (for information only -- these are summary translations and should be kept internally); -- biographical background information.

After discussions with Ted Lattanzio, Steve Parrish, Tom Borelli, and Matt Winokur, we have agreed that it would be worth taking this proposal to the next step. In this regard, I proposed that you and Jenny meet with the Dr. Joseph M. Wu, the consultant involved in this project, to get your impressions. Please note that Shook, Hardy and Bacon has overseen his work to date for the company.

I learned only this past Monday that he would be traveling to Hong Kong and China this week and apologize for the short notice. He was scheduled to arrive at the Garden View Hotel in Hong Kong on Thursday evening, November 18, and plans to spend most of next week in Guangzhou. He would be available to meet with you and Jenny on Monday, November 22 but is also willing to meet Saturday, the 20th or Friday, the 26th, if it turns out to be more convenient.

I will call you Friday morning to discuss further and give you a better idea of what has been proposed. Discussions of the proposed project should be kept within the company for the time being. I have agreed with Dr. Wu that someone from PM will be in touch with him in Hong Kong Friday -- either from here or there -- in regard to a meeting. (As I am at a Japan Chamber of Commerce dinner til about 9 pm, I'll try to reach you between 10 and 11 your time.)

Best wishes,

Jan
